

— JERVIX TECHNOLOGIES

Future-ready software and **AI engineering** for growing businesses.

Jervix Technologies designs, builds and scales AI solutions, custom software, web and mobile applications, SaaS platforms and cloud systems — for startups, SMEs and enterprises across global markets.

• Business-first thinking

• Scalable engineering

• AI-ready architecture

ABOUT JERVIX

From idea to impact.

We help clients turn a promising idea into a useful product through careful analysis, transparent execution and dependable delivery. Every engagement is a shared responsibility: you bring the vision and knowledge of your business, we bring analysis, technology and structured execution.

By working closely together from the very first conversation, we protect the purpose of your idea while shaping it into an outcome that creates real impact for your business.

WHAT DEFINES OUR WORK

**Business-First Thinking**

We connect every feature to business goals, users, operations, cost and measurable impact.

**Scalable Engineering**

We build maintainable applications, APIs and cloud foundations that can grow with your company.

**AI-Ready Architecture**

We apply AI, data and automation where they reduce manual work and unlock new capability.

**Dedicated Delivery Teams**

Focused engineers, clear communication and delivery discipline on every engagement.

**Global Delivery**

We work with clients across time zones and continents, adapting communication and delivery to fit how your team works.

**On-Time, With Ongoing Feedback**

Committed timelines tracked to completion, with continuous feedback assistance at every stage of the project.

SERVICES

AI and software engineering for serious business systems.

We plan, design and engineer custom digital platforms for companies that need reliable software, modern user experiences, automation and dependable delivery support.

**AI Development**

AI assistants, automation, prediction tools and workflow intelligence built around your real business data.

**Custom Software Development**

Tailored web applications, portals, dashboards, APIs and workflow systems — from Figma designs to custom WordPress, WooCommerce and Shopify platforms.

**Web & Mobile App Development**

Responsive web apps in React, Next.js or Angular, and mobile apps in React Native, with clean UX and release-ready engineering.

**SaaS Product Development**

Subscription platforms, admin systems, user roles, dashboards, integrations and billing workflows.

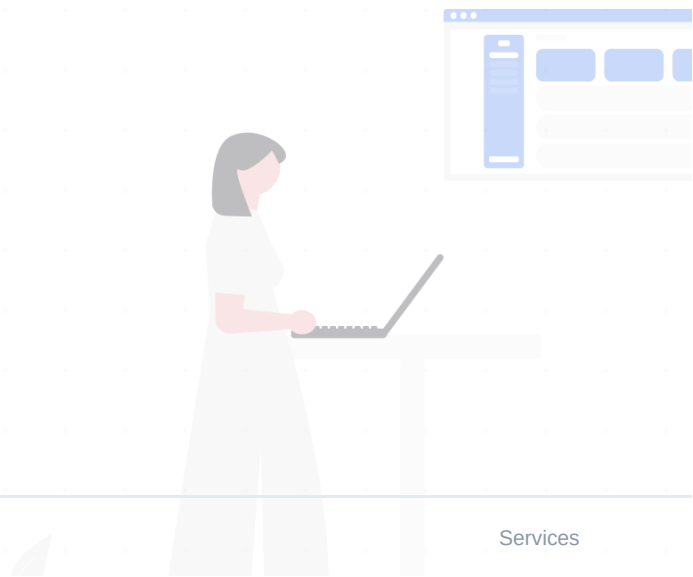

**Cloud & Enterprise Solutions**

Cloud deployment, enterprise software, integrations, reporting systems and scalable infrastructure.

**IT Consulting & Dedicated Teams**

Technology roadmaps, architecture guidance and dedicated developers for long-term delivery.

Every engagement is shaped around your business value — not just the technology — so what we build stays practical, scalable and ready for real customers.

AI DEVELOPMENT & CUSTOM SOFTWARE

Depth where it matters most.

Two of our most requested capabilities, in more detail — applied AI built around your own data, and custom software that fits the way your business actually operates.

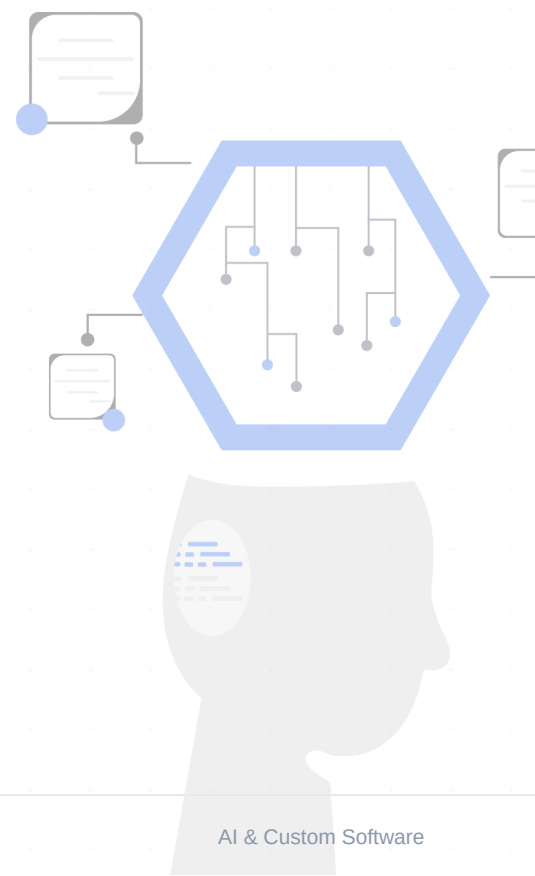

Applied AI

- ✓ GenAI application development — from prototype to deployed, user-facing product
- ✓ Retrieval-Augmented Generation (RAG) for knowledge assistants grounded in your data
- ✓ Vector database integration for efficient embedding storage and retrieval
- ✓ Model fine-tuning, adapting foundation models to domain-specific tasks
- ✓ Hallucination mitigation — evaluation, grounding & guardrails for trustworthy output

Custom Software & CMS

- ✓ Figma-to-code — pixel-perfect, semantic HTML/CSS built directly from your design files
- ✓ Custom WordPress theme, plugin & functionality development
- ✓ Dynamic builds with Advanced Custom Fields (ACF), Custom Post Types & Elementor
- ✓ WooCommerce management, security hardening & payment gateway integration
- ✓ Shopify storefronts and custom apps built in Liquid for product, collection & content pages
- ✓ Core Web Vitals optimization for speed, UX and search performance

TECHNOLOGY STACK

The technologies behind every build.

We choose tools for maintainability and fit, not novelty — a consistent, production-tested stack that spans design, engineering, data and infrastructure.

Every stack decision is made for the project in front of us — performance, scalability and total cost of ownership guide the choice, not trend.

WEB, MOBILE & SAAS ENGINEERING

Products built to scale.

Every product is architected for growth from day one — clean API design, cloud-ready deployments, and a data layer chosen to match the workload, not just convention.

SaaS Product Development

Subscription platforms, admin systems, user roles, dashboards, third-party integrations and billing workflows — built as a product, with a roadmap in mind.

WHAT WE BUILD

Types of projects we deliver.

A cross-section of the work clients bring to us most often — each one engineered end to end, from first sketch to production support.

Business & Corporate Websites

Custom-built or WordPress-powered websites that present your company clearly and convert visitors into leads.

Ecommerce Stores

Shopify and WooCommerce storefronts — product catalogues, checkout, payments and inventory that scale with sales.

Landing Pages & Marketing Sites

Figma-to-code builds and campaign-ready pages engineered for speed, SEO and conversion.

SaaS Platforms & Dashboards

Multi-tenant subscription products with user roles, billing, analytics and admin consoles.

AI-Powered Products & Assistants

RAG-based chatbots, GenAI features and workflow automation built around your own data.

Mobile Applications

React Native apps for iOS and Android, built from a shared, maintainable codebase.

Enterprise Portals & Internal Tools

Reporting systems, admin panels and internal software that streamline day-to-day operations.

Custom Web Applications

Full-stack products on React, Next.js or Angular with Node.js or Laravel APIs and a database layer to match the workload.

CLOUD, ENTERPRISE & DESIGN

Infrastructure and design that support the product.

Reliable systems at scale, guidance when you need to plan ahead, and design work that carries the engineering through to how it looks and feels.

**Cloud & Enterprise Solutions**

Cloud deployment, enterprise software, integrations, reporting systems and scalable infrastructure planning.

**IT Consulting & Dedicated Teams**

Technology roadmaps, architecture guidance, product planning and dedicated developers for long-term delivery.

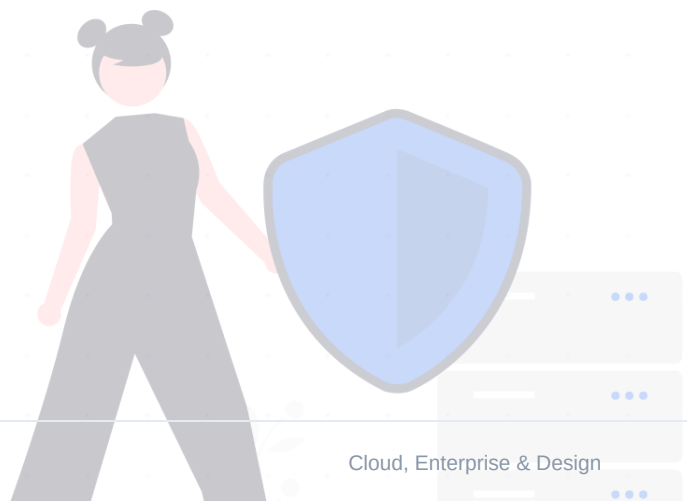

**Brand & Identity Design**

Distinct, defensible marks with a visual system behind them — not just a logo.

**UI/UX & Marketing Design**

Interface design for web & mobile products, plus campaign-ready marketing and presentation design.

The same team that builds the product designs how it looks and feels, so brand, interface and code stay in sync instead of arriving from three different places.

HOW WE WORK

Agile delivery, backed by a clear SDLC.

We follow agile methodology paired with a structured software development lifecycle, so every project stays predictable — with visible progress, milestone approvals and quality checks at each phase.

01

Requirement Analysis

We listen first, understand your goals, users, challenges and success expectations, then define what needs to be built.

02

Estimate & Approval

You receive a clear scope, timeline, cost estimate and delivery plan before the project moves forward.

03

Design & Architecture

After approval, we create the user flow, UI direction, feature structure and technical foundation for scalable delivery.

04

Agile Development

Our team builds the product in short, planned sprints with clean code, regular updates and room for practical feedback.

05

Testing & QA

We test features, usability, performance, security and device compatibility so the release feels stable and ready.

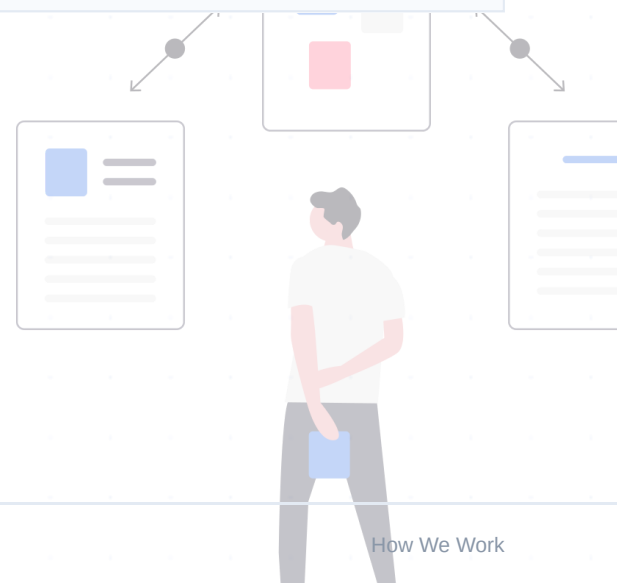

06

Deployment & Support

We handle launch, monitor the release, fix issues quickly and continue supporting improvements after deployment.

AGILE PRACTICES WE FOLLOW

- ✓ Iterative, milestone-based delivery in short, manageable sprints
- ✓ Delivery timelines committed upfront and tracked closely, so your launch date stays on schedule
- ✓ Daily status reports — clear updates on progress, priorities and next steps
- ✓ Module demonstrations and reviews at each significant milestone
- ✓ Ongoing feedback assistance during development and after launch, so support is never limited to a formal review cycle

HAVE AN IDEA?

Let's explore the impact it can create.

Share your vision with us, and we will help you understand the practical path from requirement to execution. You do not need a perfect brief — just your goal, timeline and expectations.

GLOBAL REACH

We welcome clients from every region and collaborate comfortably across time zones, adapting our communication and delivery schedule to fit your market.
